Screen resolution	1024 x 768 or higher (recommended), 800 x 600 (minimum)

INTERNET CONNECTION

The following table lists the recommended Internet connections. The options are listed in order of fastest to slowest connection speeds.

Connection Type	Advantages and Disadvantages
T1	Most expensive, but fastest.
Broadband - DSL, cable, ISDN, or LAN-based	Reasonably priced, with good speed.
Dial-up	Least expensive, but can be too slow and may cause Voyager performance issues.

- The hardware and software specifications listed in this document are for Yardi ASP services that were available at the time of this publication. As existing services are upgraded or newer services and systems are introduced, Yardi reserves the right to update and modify these recommendations.
- Yardi ASP services use connection technology available through Internet browsers or Citrix Metaframe applications. This enables the use of less powerful client computers, compared to servers on which Yardi software must be installed locally.
- Hardware, memory, and storage requirements can vary greatly, depending on the number of users, network applications, hard disk sizes, remote connection type, and other issues. Your organization should regularly review company hardware and software resources and compare them to current system requirements.
- Most clients connect to Yardi ASP services through the Internet or a remote-desktop connection utility. Good security practices for remote-access communications also require the use of standard client-security hardware and software, such as corporate firewalls and utilities for protection against computer viruses and spyware. Configuration of local client hardware and software security is the responsibility of the user.
- For computer and peripheral requirements and resources in your organization, contact your system administrator or computer consultant. For additional information about and updates to Yardi system requirements, contact Yardi technical support.

(*) System requirements presented herein are accurate and reliable to the best of Yardi's knowledge and belief but are not guaranteed to be so. These requirements are subject to change without notice. Nothing herein is to be construed as recommending any practice or any product in violation of any patent or in violation of any law or regulation. It is the user's responsibility to determine the suitability of any equipment and/or procedure for a specific purpose and to use such equipment and/or procedure as may be necessary and pertinent to the user's organization and business practices.
